Dataset name	HouseholdResidencies
Description	This table links Households to Bounded Structures. A Household can only have one Residency episode at a time. i.e. Residencies do not overlap. The Start Event of the Household coincides with Start Event of its first HouseholdResidency. Equally, its End Event coincides with the End Event of its last HouseholdResidency. Gaps in a Household's Residency episodes will occur when a Household moves outside the DSA area. Typically Residencies start with DSS (already there at DSS start) or an immigration of some sort, while they normally end with a Visit (i.e.still there at most recent DS Round) or an outmigration or death of last member.
Rows/Units of analysis	One row per Household Residency
Unique identifier(s)	HHRIntId is unique. HHINtId + BSIntID is not unique because a small number of households have 2 or more Residency Episodes at one BS i.e. they moved away and later came back.
Approx. number of rows	Approaching 22,800 as at June 2011
